

BUILT ON THE CHANCELLOR'S 2026-2027 ACTION PRIORITIES

The WCCCD AI Adoption Framework

A plan for adopting artificial intelligence deliberately — with a working proof of concept

Every AI use case serves a named outcome — for our students, our operations, and our mission.

THE SITUATION

The gap is governance, not technology

94%

of higher education professionals
have used AI for work

EDUCAUSE, 2026

54%

are aware of any institutional policy
governing that use

EDUCAUSE, 2026

12

Chancellor's Action Priorities;
Priority 3 directs the District to build
the AI model and policies

wcccd.edu

The choice is governed adoption rather than ungoverned arrival.

Two foundations, one permanent line

01

Built on the Chancellor's priorities

Every AI use case must trace to one of the twelve Action Priorities and name the outcome it serves — enrollment, completion, service, or efficiency — before any tool is considered.

02

Grounded in validated research

Achieving the Dream's roadmap for the AI-enabled community college, the NIST AI Risk Management Framework, and EDUCAUSE's 2026 research — every source dated and verified current.

One line never moves: AI does not make consequential decisions about people. That authority stays with District employees, permanently.

THE STRUCTURE

Governance sized for WCCCD — no new positions

AI Steering Committee

Drawn from existing roles; biweekly for the first 90 days; a coordinator assignment, not a new office.

Acceptable Use Guideline

Interim guidance drafted and ready to issue, with a 60-day comment period through shared governance.

Compliance by default

FERPA, GLBA, and ADA/WCAG accessibility are gate requirements, with a simple three-level data classification.

Build, buy, and embedded AI

Staff may build tools on approved platforms; vendor AI gets a procurement addendum and an audit of platforms we already license.

AI agents, by parameters

Agents governed by what they may do (read, transact, write) — not by a calendar.

A twelve-month plan

First pilot live within 90 days of launch; every pilot measured against a baseline; results to Cabinet.

Risk tiers: review that scales with risk

Tier 1

Everyday assistance

Approved tools, public and non-sensitive information; no approval needed.

Tier 2

Reviewed work support

Internal content, human review before anything is acted on.

Tier 3

Sensitive or student-facing systems

Committee review, data protection and accessibility assessment, named owner.

Reserved to people

Permanent

Admissions, aid eligibility, grades, discipline, accommodations, employment.

AI assists. People decide.

PROOF OF CONCEPT

The ENG 119 Companion

- AI generated a complete practice app strictly from the course syllabus
- Quiz prep, essay coaching, and mastery tracking mapped to real competencies and grade weights
- Practice-only: it cannot write a student's paper
- Zero student data — no accounts, no servers, no cost; works offline on any phone
- ENG 120 in process on the same engine — about a week of content work per gateway course

LIVE DEMO — five minutes · ecrutch1.github.io/Eng119

The proof of concept serves the priorities

Priority 3

AI-driven efficiency model and policies

The framework is this priority's deliverable; the companion is its first working product.

Priority 4

Distance learning and virtual support

Around-the-clock guided practice on any device, online or offline.

Priority 8

High-touch, student-centered support

Structured practice absorbs repetition, so class and office-hour time go to teaching.

Priority 9

The Completion Agenda

Aimed at gateway English — among the strongest predictors of persistence and completion.

Equity

A framework guiding principle

Free, no login, works offline after first load — built for students with unreliable devices or data.

Where this goes next: the Year 1 pilot slate

01

Student services navigation

24/7 answers from public District content, with staff handoff

02

Financial aid communications

Plain-language drafts and file-completeness flags; never eligibility decisions

03

FERPA compliance assistant

Staff-facing policy and records answers, citing sources

04

Security operations support

Alert and phishing triage for IT security staff

05

Re-enrollment outreach

Personalized drafts to stopped-out students; staff review every message

Committee selects three or four — every pilot has a baseline, human review, and an end date with a decision.

SEQUENCE

The twelve-month roadmap

THE FIRST 90 DAYS

How we will know it is working

Governance

Policy awareness above 80% (national baseline: 54%); zero reportable AI data incidents

Literacy

Training completion across all four role-based tracks

Service

Each pilot measured against its baseline: response times, after-hours coverage, staff hours redirected to students

Equity

Usage and outcomes disaggregated by student group for every student-facing pilot

Every pilot ends with a documented decision — scale, revise, or stop.

Three decisions put the plan in motion

1

Charter the governance

Name an executive sponsor and charter the AI Steering Committee; first meeting within two weeks.

2

Issue the interim guideline

Drafted and ready, with a 60-day comment period through shared governance.

3

Set the 90-day expectation

First pilot live within 90 days; progress report at that mark; results at end of semester.

No new positions. A coordinator assignment within existing staff, committee time, and licensing within current budgets — consolidated Year 1 cost estimate at day 60.

The plan is already running, at small scale, inside its own rules.

Every AI use case serves a named outcome — for our students, our operations, and our mission.
